***** All information in this document is the property of the Amber group. It must not be shared, distributed or copied in any way. *****

CONFIDENTIAL

Location: Tabula Rasa, Madagascar

Description: Mega-complex

Population: 1,000,000 +

Construction start: 2035

Structures: Three main pyramids. Cibus, Primus and Gaudium. (Fourth planned, not named yet). A large harbor for shipping traffic, and two smaller harbors. Two main runways for commercial and transportation flights.

Summary: Established on the coast of Madagascar, Tabula Rasa is one of the most advanced mega-complexes. It is the brainchild of John Vendrick III, a reclusive, powerful business leader. There is no present photograph of John, last known photograph was taken seven years ago.

Besides Vendrick, the control of the mega-complex is handled by a committee that oversees the daily work. Tabula Rasa is listed on the main stock exchanges and currently holds the highest valuation all listed mega-complexes.

Currently, the status of Tabula Rasa is high, which leads to many applicants for them to select from which in turn leads that their research- and manufacturing processes are highly competitive.

Cibus:

Overview of Tabula Rasa mega-complex.

Cibus is the pyramid where the food resources are produced and distributed around the mega-complex. A wide variety of food supplies are cultivated here, and special care is being taken to maintain a sustainable production of the required supplies.

Most of the food produced is vegetarian, only a small portion of the production is livestock.

Note – There has been scattered reports that there are certain, not-fully-understood challenges related to closed eco-system that is found on Tabula Rasa. A level of decay (sour smell) has been reported and it has been noted that an internal resource department has been allocated in determining the problem areas and causes.

Primus:

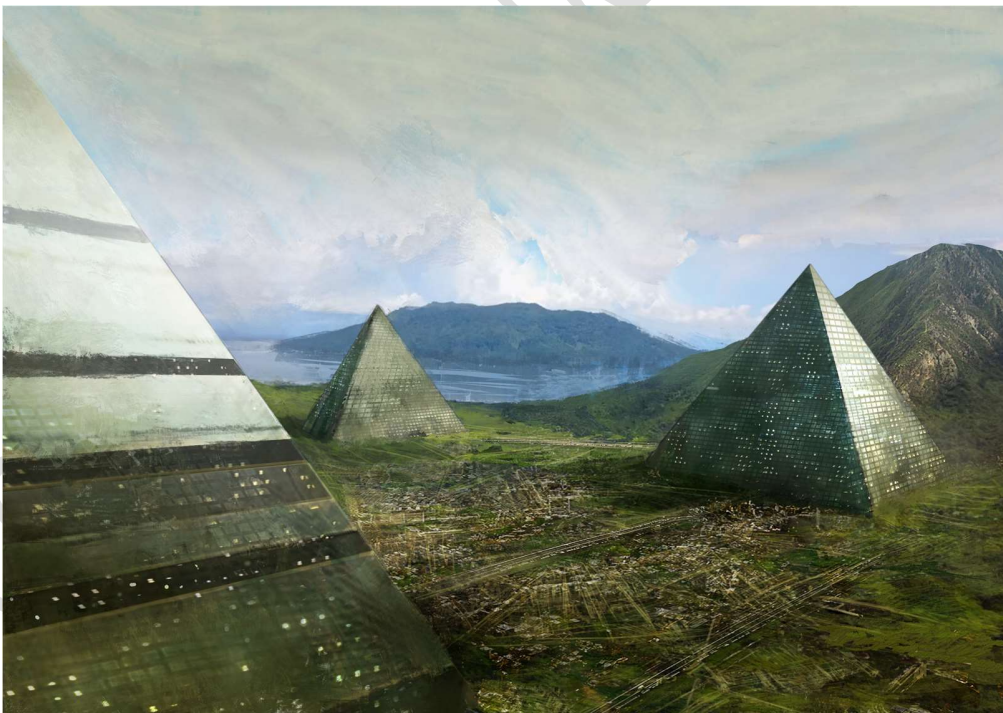

Main power-generation center. Most of the power used on Tabula Rasa is produced in Primus using a variety of cutting-edge power facilities.

By using an advanced form of licensing model, Tabula Rasa has been able to monetize their highly developed technologies to other mega-complexes around the world.

Known technologies used at Tabula Rasa:

- Solar power
- Geothermal
- Wind
- Unknown other sources

Further investigation of the technologies used is recommended since it is suspected that a new, unknown form of power generation has been developed at Tabula Rasa.

Primus pyramid.

Gaudium:

The primary purpose of this pyramid is to house the complex social hierarchy found on Tabula Rasa. The Latin word Gaudium translates to 'Joy'. More than 85% of the Tabula Rasa's population resides in Gaudium.

The housing modules contain thousands of apartments that are arranged in a pattern for maximum efficiency. Each person is assigned an apartment depending on their social ranking. Several large parks are located with Gaudium.

Gaudium.

Languages:

- English, French and Malagasy.

Access:

- Access is granted by [REDACTED] [REDACTED]. The process of application is controlled via official Application Centers around the world. The process is very strict, and only a small fraction of applicants are accepted.

Current expansion plans

- A fourth pyramid is currently being planned. Construction start is planned to commence 2051 and is estimated to take approximately four years. The focus of the new pyramid will be further investments into automated manufacturing processes of the required materials and products to continue to develop Tabula Rasa.
- Current responsible for project oversight is Derek Lamm together with temporary CEO [REDACTED].

Miscellaneous

- It is suspected that non-sanctioned experiments are conducted regarding advanced medical procedures.
- The two responsible doctors, Dr. [REDACTED] and Dr [REDACTED] are currently not cooperating

with the International Trade Department which oversees these types of experiments on all major mega-complexes.

- The International Trade Department is compiling an indictment against Tabula Rasa to force them to reveal the state of their research programs.
- Further analysis recommended.
